

FRANCE 1986 Election Study

Methodology:

Each national survey was conducted by a professional polling agency. Representative samples of the total population of age fifteen years and older were drawn in each country. The sampling designs were either multi-stage national probability samples or national stratified quota samples. In the administration of the Euro-Barometers, samples of Great Britain and of Northern Ireland are drawn independently of each other. Thus, a weighting factor for the United Kingdom is necessary to maintain the representativeness of the United Kingdom sample. In all, Eurobarometer 26 interviewed 11,837 citizens of the 12 countries in the European Community. Respondents were aged 15 and over.

Total Sample: 542.

Data Acknowledgements:

Euro-Barometer 26 was conducted by Jacques-Rene Rabier, special advisor to the Commission of the European Communities, Helene Riffault of Faits et Opinions, and by Ronald Inglehart of the University of Michigan. The study was carried out in all twelve European Community nations: France, Belgium, Netherlands, Germany, Italy, Luxembourg, Denmark, Ireland, United Kingdom, Greece, Spain, and Portugal. The interviews were conducted in October and November of 1986. The special topic of the survey was Energy Problems.
