

## **GREECE 1984 Election Study**

### *Methodology:*

Each national survey was conducted by a professional polling agency. Representative samples of the total population of age fifteen years and older were drawn in each country. The sampling designs were either multi-stage national probability samples or national stratified quota samples. In the administration of the Euro-Barometers, samples of Great Britain and of Northern Ireland are drawn independently of each other. Thus, a weighting factor for the United Kingdom is necessary to maintain the representativeness of the United Kingdom sample.

Total Sample: 466.

Euro-Barometer 24 was conducted by Jacques-Rene Rabier, special advisor to the Commission of the European Communities, Helene Riffault of Faits et Opinions, and by Ronald Inglehart of the University of Michigan. The study was carried out in all ten European Community nations: France, Belgium, Netherlands, Germany, Italy, Luxembourg, Denmark, Ireland, United Kingdom, and Greece. For the first time, surveys were undertaken in the new EEC member nations of Spain and Portugal. The interviews were conducted in October and November of 1984.
