

GREECE 1991 Election Study

Methodology:

Between October 15 and November 21, 1991, INRA, a European Network of Market and Public Opinion Research Agencies, carried out wave 36 of the Standard Eurobarometer.

The Eurobarometer 36 covers the population of the respective nationalities, aged 15 years and over, in each of the Member States of the European Community. In addition, a separate national survey was conducted independently in Norway. The basic sample design applied in all Member States is a multi-stage, random (probability) one. In each EC country, a number of sampling points were drawn with probability proportional to population size (for a total coverage of the country) and to population density.

Total Sample: 406.
