

IRELAND 1986 Election Study

Methodology:

Each national survey was conducted by a professional polling agency. Representative samples of the total population of age fifteen years and older were drawn in each country. The sampling designs were either multi-stage national probability samples or national stratified quota samples. In the administration of the Euro-Barometers, samples of Great Britain and of Northern Ireland are drawn independently of each other. Thus, a weighting factor for the United Kingdom is necessary to maintain the representativeness of the United Kingdom sample. In all, Eurobarometer 26 interviewed 11,837 citizens of the 12 countries in the European Community. Respondents were aged 15 and over.

Total Sample: 1007.
