

SPAIN 1990 Election Study

Methodology:

Between October 10 and November 2, 1990, INRA, a European Network of Market and Public Opinion Research Agencies, carried out Wave 34 of the standard Eurobarometer.

Eurobarometer 34 covers the population of the respective nationalities, aged 15 years and over, in each of the member states of the European Community. The basic sample design applied in all member states is a multi-stage, random (probability) design. In each EC country, a number of sampling points were drawn from all administrative regional units after stratification by individual unit and type of area (degree of urbanization). In each sampling point a starting address was drawn at random. Further addresses were selected by standard random route procedures. In each household, the respondent was selected according to a random procedure. Up to two recalls were made to achieve an interview. All interviews were carried out face-to-face in people's homes in the respective national languages. It is believed that Norway followed a similar sampling procedure, though this information was not provided.

Total Sample: 432.

Data Acknowledgements:

This series of survey was originally conducted under the direction of Jacques-Rene Rabier. Since 1987, Dr Karlheinz Reif and Dr. Anna Melich have directed the surveys. Ronald Inglehart of the University of Michigan helped in making the data available to the social science community. Eurobarometer 34 was carried out in all twelve European Community nations: France, Belgium, Netherlands, Germany, Italy, Luxembourg, Denmark, Ireland, United Kingdom, Greece, Spain, and Portugal. In addition, the Norwegian Social Science Data Services conducted a survey in Norway, which is incorporated to Eurobarometer 34. The interviews were conducted in October and November of 1990. The special topic of the survey was European Youth.
