

UK 1991 Election Study

Methodology:

Between October 15 and November 21, 1991, INRA, a European Network of Market and Public Opinion Research Agencies, carried out wave 36 of the Standard Eurobarometer.

The Eurobarometer 36 covers the population of the respective nationalities, aged 15 years and over, in each of the Member States of the European Community. In addition, a separate national survey was conducted independently in Norway. The basic sample design applied in all Member States is a multi-stage, random (probability) one. In each EC country, a number of sampling points were drawn with probability proportional to population size (for a total coverage of the country) and to population density.

Total Sample: 637.

Data Acknowledgements:

This series of survey was originally conducted under the direction of Jacques-Rene Rabier. Since 1987, Dr Karlheinz Reif and Dr. Anna Melich have directed the surveys. Ronald Inglehart of the University of Michigan helped in making the data available to the social science community. Eurobarometer 36 was carried out in thirteen nations: France, Belgium, Netherlands, Germany, Italy, Luxembourg, Denmark, Ireland, United Kingdom, Greece, Spain, Portugal, and Norway. The interviews were conducted in October and November of 1991. The special topic of the study was Regional Identity and Perceptions of the Third World.
